

You can customize the Verge.io interface to correspond with your own brand. Additionally, your customers can be empowered to custom brand as you can allow/disallow ui branding on a per-tenant basis.

Configure Custom Branding in Your System:

- Upload your custom logo files to the vSAN (**Home -> Media Images**). Custom logo files in **.jpg** or **.png** format with the following dimensions should be used: (**Large**): 144 x 36 pixels and (**Small**) 44 x 44 pixels
- From the home screen navigate to: **System > Settings > Edit UI Branding**.

The screenshot shows the 'Custom Branding' configuration page. At the top, there is a toggle for 'Enabled' which is checked and circled in red. Below it are 'Reset to Defaults' and 'Preview' buttons. The main area is divided into several sections: 'Header', 'Buttons', and 'Misc.'. Each section contains various color and logo settings. A red box highlights the 'Custom Logo (Large)' and 'Custom Logo (Small)' dropdown menus. A red arrow points from these dropdowns to a text box that reads: 'Select Custom Logo (Large) and select your 144x36 logo file from the list, then select Custom Logo (Small) and select your 44x44 logo file from the list. Files should be uploaded to the vSAN first (go to Home -> Media Files)'. Another red arrow points from the 'Background Color' field in the 'Header' section to a text box that reads: 'Each color-section field can accept a specific hex code or the color palette can be used to configure RGB values or a click selection on the color bar.'

- **Check** the box for **Enabled** to begin the process for customizing the UI.
- **Select your uploaded logo files (Large and Small)** from the dropdown list.
- While still in the UI Branding section, configure custom colors for any desired components; to change a color setting: enter the desired hex code -Or- click the color palette to enter RGB values or click in the color bar to make a selection; when the intended color is displayed click outside of the palette window.

Allow UI Customization for A Tenant:

- Navigate to the dashboard for the tenant (**Home -> Tenants -> Tenants -> double click the desired tenant**).
- Click **Edit** on the left menu.
- Check the **Allow Custom Branding** checkbox to enable customization for this tenant.
- Optionally, a custom URL can also be defined for this tenant to access inline help.
- Click **Submit** at the bottom of the page.

Allow Custom Branding

i If set, the tenant will be able to customize colors and their logo

Custom help URL

default

i Enter a url, blank to disable, or 'default' for default help.

Benefits

UI Branding allows managed service providers to offer a white label cloud offering to their reseller partners, which can then also offer a white label cloud to their resellers and so on. Enterprise customers use the feature to brand tenants for subsidiaries, giving each subsidiary (or business unit or geography) their own tenant and branding.

Test Drive - UI Branding

Further the Discovery
